

Interview Questions — AI Tools for Front-End Developers

Total Questions: 39

1. What is generative AI, and how is it being used in modern web development?

Hint: Think about AI tools that can create code, text, or designs from prompts.

2. Name three AI tools commonly used by front-end developers and briefly describe what each does.

Hint: Consider tools for code, design, and content.

3. How can AI assist developers in web projects without completely replacing their role?

Hint: Focus on support, acceleration, and error reduction rather than automation.

4. What are some ethical considerations you should keep in mind when using AI tools in web development?

Hint: Think about bias, plagiarism, and responsible use.

5. Explain the basics of prompt engineering and why it matters when using AI tools like ChatGPT.

Hint: Consider how the quality of your input affects the AI's output.

6. Suppose you want to generate a basic HTML landing page outline using ChatGPT. What kind of prompt would you give, and what would you expect as output?

Hint: Mention structure (header, main, footer) and clarity in your prompt.

7. How would you use ChatGPT to help you debug a React component that is not rendering as expected?

Hint: Think about describing the error and sharing code snippets.

8. Describe the steps to install and activate GitHub Copilot in Visual Studio Code.

Hint: Focus on extensions and authentication.

9. Why is it important to review code suggested by Copilot or ChatGPT instead of just accepting it?

Hint: Consider code quality, bugs, and project requirements.

10. Write a prompt you would give to ChatGPT to refactor a React component for better readability and reusability.

Hint: Specify the goal, such as extracting hooks or improving naming.

11. If Copilot suggests a change to your React code that you don't fully understand, what should you do next?

Hint: Think about testing, reading documentation, or asking for explanations.

12. How can Figma AI help speed up the wireframing process for a new web project?

Hint: Focus on generating layouts from text prompts.

13. What is Uizard, and how does it differ from Figma AI in the context of design automation?

Hint: Consider the type of input and the output each tool produces.

14. Describe a workflow for converting a Figma design into HTML and CSS code using AI tools.

Hint: Think about plugins or export features.

15. Suppose you want to create a homepage design for a fitness app using Uizard. What steps would you follow from prompt to export?

Hint: Mention inputting a prompt, reviewing the design, and exporting.

16. How does a design-to-code handoff work when using AI tools in your front-end workflow?

Hint: Focus on moving from design files to developer-ready code.

17. What is the Figma to Code plugin, and how does it assist in the development process?

Hint: It helps generate code directly from design elements.

18. Name two AI tools used for generating images or visual assets for web projects.

Hint: Think about tools that work from text prompts.

19. How would you use Adobe Firefly to create a hero image for a tech startup website?

Hint: Mention prompt writing and downloading the generated image.

20. What factors should you consider when optimizing AI-generated images for use on the web?

Hint: Think about file size, format, and loading speed.

21. Describe the difference in output style between Midjourney and Adobe Firefly when generating images.

Hint: Consider realism, style, and control over details.

22. If you need a set of modern icons for your app, how could you generate them using AI tools?

Hint: Mention prompt-based generation and customization.

23. How can you ensure that the images generated by AI tools match your project's color scheme and branding?

Hint: Specify colors or style in your prompts.

24. How would you use ChatGPT to generate SEO meta titles and descriptions for a new product landing page?

Hint: Think about providing product details and target keywords in your prompt.

25. What are the risks of plagiarism or bias when using AI-generated content for blog posts, and how can you avoid them?

Hint: Consider originality checks and reviewing content.

26. Explain the importance of keyword clustering in SEO and how AI tools can assist with it.

Hint: Focus on grouping related terms for better organic reach.

27. What steps would you take to integrate AI-generated SEO tags into the section of your HTML file?

Hint: Mention copying the output and placing it in the correct tags.

28. Suppose you need to generate alt text for a set of product images. How could you use ChatGPT to do this efficiently?

Hint: Describe batching and describing images in your prompt.

29. How can you use AI to generate both the visual layout and the written content for a landing page project?

Hint: Think about combining design and text generation tools.

30. Describe a workflow for building a landing page prototype using Uizard or Figma AI, Firefly for images, and ChatGPT for content.

Hint: Mention sequential use of each tool for layout, visuals, and text.

31. In a mini project, how would you use Copilot to help you code the front-end layout after generating designs and content with AI tools?

Hint: Focus on translating design to code and using Copilot for suggestions.

32. If you encounter a bug in your AI-generated React code, how would you use ChatGPT to help you resolve it?

Hint: Describe sharing the error and code snippet for explanation.

33. What are the advantages and potential limitations of relying on AI tools for both design and development in a real-world project?

Hint: Consider speed, creativity, accuracy, and the need for human review.

34. How would you verify that the code generated by Copilot or ChatGPT is secure and meets project requirements?

Hint: Think about code review, testing, and best practices.

35. Integrate: How can you ensure that the AI-generated images (from Firefly) and the SEO tags (from ChatGPT) work together to improve the landing page's appeal and search ranking?

Hint: Consider both visual relevance and descriptive accuracy.

36. Integrate: Describe how you would use both Figma AI and Copilot together to streamline your workflow when building a new feature in a React project.

Hint: Think about using AI for design first, then for code.

37. Integrate: When working on an AI-assisted landing page project, how would you handle inconsistencies between the design generated by Uizard and the code generated by Copilot?

Hint: Consider manual adjustments and reviewing both outputs.

38. AI Literacy: How would you use ChatGPT or Copilot to help fix a bug in your code, and what steps would you take to make sure the suggested solution actually works?

Hint: Mention testing, code review, and understanding the fix.

39. AI Literacy: In what situations would you trust your own skills over the output from an AI tool like Firefly or ChatGPT, and why?

Hint: Focus on creativity, accuracy, and project requirements.
